Methamphetamine Prevalence, and Effects on Brain and Behavior

This webinar will provide an overview of recent data on methamphetamine prevalence nationally and in Wisconsin. It will include a description of methamphetamine effects on the brain, and short-term and long-term drug effects on the user. As well as some general considerations in treating methamphetamine dependence.

Upon completion of this webinar attendees will be expected to:

- Understand the prevalence of methamphetamine use and the increases in use both nationally and in Wisconsin.
- Understand the effects of methamphetamine on the brain.
- Understand the effects of methamphetamine on sexual behavior.
- Know which medications and psychosocial treatments are effective in treating methamphetamine dependence.

Evidence-based Treatment Approaches for Methamphetamine Dependence

This webinar will provide a description of what general approaches are useful in treating methamphetamine dependence and current evidence-based treatments (CBT, Matrix Model, contingency management, mindfulness, and aerobic exercise). This will include research data supporting treatments and some examples of treatment implementation.

Upon completion of this webinar attendees will be expected to:

- Understand what general treatment approaches are effective in treating methamphetamine dependence.
- Understand the basic elements of CBT (including Matrix Model).
- Understand the research support for CBT, contingency management and other interventions.
- Learn some practical, low cost applications of contingency management.
