

As of October 10, 2020

Current Risk Level: Severe (only within household for indoor and less than 10 for outdoor with physical distancing measures)

For a more in depth look at the data and a full description of the measures, [view the full document](#).

Group	Category	Measure	Actual	
Disease Occurrence	Activity Level	A composite measure that combines burden and trajectory. The burden is the number of COVID-19 cases per capita in the last 2 weeks. The trajectory is the percent change in patients from the previous week to the current week.	High	
	Outbreaks	Number of open outbreaks in the last 7 days	5	
	Testing	Qualitative Analysis from Health Officer: Is the number of tests being conducted sufficient to identify and mitigate disease in Chippewa County?	Would like to see more asymptomatic testing	
HERC Region 1 Healthcare Availability	Trajectory of inpatients COVID-19 cases	The percent change in patients from the previous week to the current week.	Growing	
	Percentage of Hospital beds available immediately	The percentage of hospital beds in use out of the total number of all staffed inpatient and outpatient beds in hospitals, in the past two weeks	27%	
	Ventilators available	the percentage of mechanical ventilators currently in use out of the total number of mechanical ventilators, in the past two weeks	83%	
Public Health Response	Case contact	% of new positive cases contacted by public health for contact tracing within 24 hours of result notification in most recent 7-day period	96.8%	
	Contact Tracing	% of contract tracing contacts interviewed within 24 hours in most recent 7- day period	80.6%	
	Contact Tracing	Capacity of Public Health staff to follow up on case contacts	Tier 2	
	Lab Timeliness	% of positive results in WEDSS within 48 hours	86.3%	
	Contacts	Average number of reported contacts per case, over the last 7-day period	3 contacts per case Range: 0 to 34	

*Due to our case surge, we were not able to contact and trace all close contacts. Thus, we are focusing on high risk contacts.
